Next generation

Neonatal eye care

Forus 3nethra neo HDFA

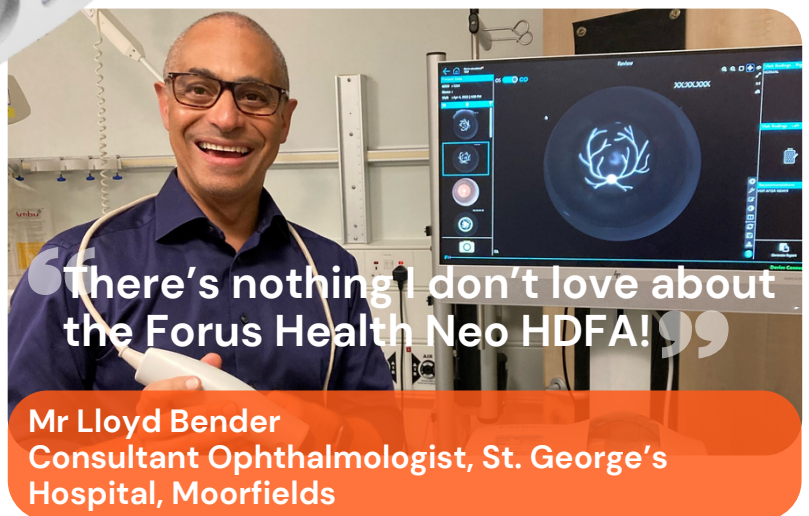

A compact, portable, and easy-to-use mydriatic 150° wide-field digital imaging system used for the photo documentation of paediatric ocular diseases.

Superior visual outputs for retinal imaging, documentation, and management of ocular diseases such as retinopathy of prematurity.

Moria neonatal ROP kit

The perfect complement to the Forus 3nethra neo HDFA (fluorescein angiography).

The single-use ROP examination kit used for retina examination in new-borns and premature infants includes a speculum and double-tip depressor.
